Sorry for the confusion. Yes, the new version of CSRC will have an FAQ “feature” that is particular to a given project, such as PQC. The Answer field will have the superscript and subscript capability, and we can turn on that capability in the Question field if you think you’ll need it.

When the new version of CSRC is rolled out early next year, PQC will be there, and anyone going to www.nist.gov/pqcrypto or to <http://csrc.nist.gov/groups/ST/post-quantum-crypto/> will automatically be redirected to the new site (which will probably be “csrc.nist.gov/projects/post-quantum-crypto” we can set up additional aliases, too, such as “csrc.nist.gov/projects/pqcrypto”).

I think he is referring to the fact that we are migrating to a new content management system and superscript might not be “turned on” yet within the software, but he can put the request in. I THINK that is what he is referring to.... 😊

Jim,

Sorry – I don’t understand what you are talking about here. Are you referring to our FAQ on www.nist.gov/pqcrypto? Or something else?

Dustin-

I just checked in our test environment, and it appears that superscripts, subscripts and other basic font styles are available in the FAQ Answers. They’re currently not enabled in the Question, but I can look into whether we can add that feature.

Sara,

Most of the things to be archived would be PDF’s, and text files. The one exception is the FAQs. We’re planning on removing one, but we should probably have it around somewhere. We could just paste it into a document called Old FAQ’s or something. So, something like a historical files page

sounds good.

That's great you can do superscripts. I don't think any of the current FAQs need it, but some of the new ones will be better off with it.

Thanks,

Dustin

Dustin,

What kind of archive files do you want to have? HTML (web page) files? Or just historical PDFs, text files? If the latter, I think we can have an HTML page with links to the historical files. (I'm cc'ing **Jim** due to the migration of CSRC that will be taking place soon).

Yes, I can currently do superscripts (in HTML coding). Is there somewhere in the current FAQ file where a character should be superscripted?

Jim – will kentico allow us to use the superscript code?

Subject: PQC website question

Sara,

We're actively working on revising our Call for Proposals, so that we can have everything done sometime in November. Most of the documents will be updated. We should probably have some kind of "archive" on the website to let people see the old versions that we had posted at one time. Do you think you can create something like that? This would apply to things like FAQ questions, Larry's implementation files, etc. Andy tells me we will have to have a 2nd FRN to kick off our submission process actually starting. It will be a very short one, which basically just says for all details go to our website. We'll have to coordinate it so that we publish everything the same time the FRN goes up.

Also, one small question. On the FAQ, Ray wanted me to check if we are able to do superscripts? Then he doesn't have to write things like 2⁸⁰, but rather can do so using the notation that is easier to look at. Thanks!

Dustin
