Hi, Kevin:

Sorry for not responding.

The NIST effort of developing quantum resistant cryptography standards are for data in motion and in storage. Please let them look at www.nist.gov/pacrypto for our process. I am one of the contact person together with Dustin Moody and Yi-Kai Liu (math division).

Regards,

Lily

Subject: right contact for quantum

Hi Lily,

I received a follow up email from a person I met in Israel last week. He's asking for a contact for the following:

- Quantum safe data in motion: can you help identify the person or process within NIST to propose post quantum data in motion solutions?

Who is the best person for me to connect them with?

Thanks,

Kevin
