Whatever Jacob did made qTESLA work. Can he do something similar with CRYSTALS-Dilithium? That's the only one left I'm having issues with.

Classic McEliece There is a NOKAT zip file (which I downloaded)

and a tar.gz file (I'm guessing that has the KAT files) Can it be made a zip?

Rainbow KAT file is a tar.gz file (can it be made a zip)

qTESLA - Received this error on quesla for several files and all the files in the implementation owners file. So they aren't extracting from the zip file for me.

I'm still working with a few others. I'm heading out for a lunch walk for now....
