Angela,

That sounds great. When would you like to talk?

Dustin

Subject: Idea for talk

Hi Dustin,

Dan and Tanja recently posted a scheme on eprint that solves the problem of how to split up the very large McEliece keys in a way that prevents denial-of-service attacks. Although I just saw the article only appeared on eprint Dec. 2nd, Ray says Dan has talked about this before. Here is the paper: <https://eprint.iacr.org/2019/1395> . I am thinking I could present this to the group.

Thank you,
Angela
